

Press Release – New Product

Affordable Taper Pin Removal Tool for Piper U-joints AD 2010-15-10

Baldwin City, Kansas, December 3, 2010 - McFarlane Aviation Products is pleased to announce the availability of the new Taper Pin Removal Tool for Piper control yoke U-joints as the latest addition to their line of innovative, quality tooling.

McFarlane offers this affordable and durable tool to save time and labor while addressing the requirements of Piper AD 2010-15-10. The AD requires inspection of the connection between the control yoke universal joint and the shaft on the forward end of the joint. During this required inspection it may be necessary to remove the taper pin, which can be very difficult due to the limited space behind the panel. The McFarlane Taper Pin Removal Tool, part number TOOL107, makes this job easy and safe.

McFarlane also offers a total solution for AD compliance with kits containing the parts necessary to replace the u-joints. Kits are available containing an FAA-PMA u-joint, nuts, shaft, taper pins, and washers, as well as kits that also include a taper reamer and drill bit. The kits are hundreds of dollars less than just the u-joint from Piper. McFarlane also stocks the Piper witness hole drill fixture and is capable of removing a stuck shaft from a u-joint for a nominal service charge.

McFarlane Aviation Products has provided general aviation with high quality replacement aircraft parts at an affordable price for over 20 years. For more information, go to www.mcfarlaneaviation.com or call 800-544-8594 or 785-594-2741.
